Skills

- Interpersonal and communication skills
- Team management
- Strategic planning
- Finance managing
- Critical Thinking
- Leadership
- Customer handling

About Me

Currently pursuing a BSc (Hons) in Information Technology Specialising in Computer Systems and Network Engineering at Sri Lanka Institute of Information Technology (SLIIT). Proficient in designing, managing, and troubleshooting network systems with expertise in various protocols, internetworking devices, and advanced tools like Nagios Monitoring and Oracle 12c. Skilled in programming, database management, and implementing innovative IT solutions.

Education

BSc (Hons) in Information Technology Specialising in Computer Systems & Network Engineering

Sri Lanka Institute of Information technology, Malabe — 2022 - 2026

G.C.E Advanced Level

Maliyadeva college, Kurunegala — 2020 - Physical science stream

G.C.E Ordinary Level

Maliyadeva college, Kurunegala — 2017

Experience

Network Engineering Intern — Aug 2024 - Feb 2025 (6 months)

Sri Lanka Telecom PLC

Gained hands-on experience in switching systems, transmission systems, ADSL, LTE, FTTH, CDMA, PSTN, SD-WAN and power systems. Contributed to optimizing network infrastructure for improved performance and reliability.

Extra curricular

- Member of SLIIT Leo club — 2022- 2024
- Member of SLIIT CSNE student community — 2023- present
- Member of SLIIT Rotaract club — 2022- 2024

Expertise

- C/C++
- Java
- Assembly
- Arduino
- Tinker CAD
- Linux
- Cisco switchers/ routers
- OSI Model
- TCP/IP Model
- Routing Protocols (RIP,EIGRP,BGP,OSPF)
- SQL
- NAT/PAT
- Install and configure internet working devices
- Troubleshoot, maintenance internet working devices
- LAN/WAN/VLAN/ STP/VTP/HSRP/Ether Channel/Subnetting
- Oracle 12 c
- Network designing
- Cisco packet tracing
- Network Security solutions (VPN/ZPF/AAA)
- Microsoft office
- Server Administration
- Nagios monitoring
- Socket programming
- R programming language
- MPLS
- Analog and digital electronics
- Firewall technologies
- Cryptography and hash functions
- Docker
- Terraform
- K8s
- Ansible
- AWS
- Git
- Jenkins
- Python
- Virtualization

Projects

Automated Garbage Collection Vehicle with Robotic Assistance

Jul 2024 - Nov 2024

Developed an automated waste management system integrating smart dustbins with a robotic vehicle. Programmed microcontrollers for Bluetooth communication, implemented IR sensors for line following, and designed robotic arms for automated waste collection and disposal. Using Arduino, Bluetooth, IR Sensors, Servo Motors with Embedded Systems, Robotics, Automation.

Torrent File Exchange Simulation

Jul 2024 - Nov 2024

Using C, Socket programming, Multi-processing, CentOS, TCP/IP. Developed a file exchange system on CentOS using socket programming. Server handled 100+ clients, serving files in chunks with multi-processing. Client supported file downloads with progress tracking and error handling. Logged connection details and transfer status. Implemented file uploads and resumption of interrupted downloads.

Implementation of Nagios Monitoring and DNS Caching

Jan 2024 - Jun 2024

Developed a robust monitoring and DNS caching solution using a CentOS server and Fedora clients. Configured Nagios Core for real-time service monitoring and system metrics, while establishing a DNS caching server to enhance resolution speed. Utilized VMware for effective virtualization and troubleshooting throughout the project.

Lead the development of an IoT-based smart farmhouse management system

Jan 2024 - Jun 2024

Utilizing GSM module, ESP32, ultrasonic sensors, Blynk and Arduino programming language. The project aimed at monitoring and maintaining the farm remotely via a smartphone application, enabling the owner to oversee various aspects of farm management efficiently.

Managed Oracle 12c database:-

Jul 2023 - Nov 2023

Installation and administration in a Windows environment, including virtual environments, container and pluggable databases. Implemented user roles, profiles, tablespaces and security constraints for a scalable and secure system.

Developed a desktop application

Jul 2022 - Nov 2022

Using Java programming language within the NetBeans IDE, integrating Apache with MySQL to create a robust management system for a small supermarket. Responsibilities included data management operations such as creation, insertion, deletion, and updating.

Designed network infrastructure for a small university

Jul 2022 - Nov 2022

Implementing a stable network architecture comprising core, distribution and access layers with Variable Length Subnet Masking (VLSM) for efficient IP address allocation.
